EXHIBIT "A"

The soybean variety, 'Riverside 2024', is an F5 selection from the progeny of the cross of Wayne x Corsoy. The progeny of this cross were advanced from F2 to F5 utilizing the single seed descent method of breeding. This variety was selected from the F5 generation and was first yield tested in the F6 generation. This variety was tested in replicated yield trials in both the F7 and F8 generations. This variety was also purified in the F8 generation by roguing. Seed multiplication was made in the F8 generation.

'Riverside 2024' has been determined to be uniform and stable with no segregation. There are no variants in this variety.

EXHIBIT B

"Riverside 2024" is an indeterminate variety which has purple flowers, gray pubescence, and brown pods. It has a yellow seed coat color and purple flowers. It has an intermediate growth habit with an average height of 99 cm. It is susceptible to Race 1 of phytophthora root rot, but it has excellent field tolerance to phytophthora. Its seed size in grams per 100 seeds is 16, compared to 12.5 for Corsoy. Riverside 2024 matures 19 days later than Corsoy.
